## Version Control

- Git and Github

## Projects

### Protect Harvest Website

Project Harvest" is a dynamic and responsive website designed for promoting rainfall harvesting techniques. This project was developed using HTML, Tailwind CSS, and JavaScript. The website features an informative layout with sections dedicated to various tips and guides on efficient water management and harvesting practices.

### Edusty Website

This project showcases the home page UI design for a university's educational website, developed using React, Tailwind CSS, and JavaScript. The design focuses on creating a visually appealing and user-friendly interface that provides an overview of the university's offerings.

### Restaurant Website

This project presents the home page design for a restaurant, created to showcase advanced UI elements and animations. Developed using HTML, CSS, and JavaScript, the design focuses on delivering an engaging and interactive user experience.

## Education

### Self-Taught Web Development

I embarked on my web development journey with Apna college, where I started learning the basics. To deepen my understanding, I turned to online resources, with Sherians Coding School on YouTube being one of the most impactful. The channel offers comprehensive content, starting from scratch, which greatly helped me build a solid foundation.
